

BOOKMANIA PROJECT SCOPE

OVERVIEW

1. A proposal containing your group's idea for the website

i We discussed about various topics and everybody agreed on the topic of the bookstore.
We have created five pages i.e. Home, List, Detail, Create, About

2. What type of data will you be storing in the MongoDB database

i According to our schema, we have used type string for every entry. Therefore, we have created a database that has five fields i.e. Title, Author, Language, Reviews and Category..

3. How will the user interact with the data and which REST API requests will you implement?

i The user can interact with the data in the database via REST API's. Following are the REST API's we have implemented: GET, POST, UPDATE and DELETE.

4. What role will Angular play in your project

i Angular will handle the front end. It follows two way binding, that is if model is updated then view will be updated automatically and vice-versa.
